INNOVATIVE OCTOPUS STAND

Since You're **Serious**
about **Quality...**
this is a **Must-Own**
Piece of Equipment

The clamps and clamp pins provide end-
less flexibility for mounting parts on the
Octopus. *The more you use it, the more
you will find uses for it.*

Built to Last

Made of all-steel construction with eight powerful clamps, and a powder coat finish. High-carbon heat-treated swivel clamp brackets. Thirty-four heat and paint-resistant protective rubber boots keep critical areas free from overspray for years of trouble-free use.

INNOVATIVE OCTOPUS STAND

GETTING THE BEST POSSIBLE colour match requires painting the parts in the same position they assume when mounted on the car. Metallic and pearl paints, especially, will lay down differently when sprayed vertically versus horizontally, affecting the resulting colour.

Another big advantage to spraying parts such as Saturn door skins and large side mouldings vertically is that there is less flat surface area for dirt to accumulate, resulting in cleaner paint finishes, while taking up less booth space. No more missed edges, like those that happen when parts are painted on a scissor stand. With the Octopus, parts can be mounted at the perfect working height in just seconds, speeding up paint times. Wet parts can be moved with ease, increasing booth efficiency.

The ability to securely hold parts at multiple points prevents distortion during the painting and baking process. This is a common problem with large plastic filler panels and bumper pads that are sprayed on scissor stands when the ends are not properly supported, making them harder to mount on the vehicle, which costs you time and money, and creating possible quality issues. The Octopus Paint Rack eliminates all of these problems.

Mobility and Stability

The Total Lock Double Braking System is easily engaged with a flick of your foot, providing zero movement by preventing swivel and roll. The 1.25 inch wheel width ensures smooth rolling over spray booth floor grates.
