

## CAMCLEAN GUNWASH

- **Keeps all spray equipment in A1 condition.**
- **Non-caustic, safe on aluminium.**
- **Reusable.**
- **Ideal for cleaning alloy wheels.**
- **Non-flammable.**

Camclean is a non-caustic, chemical cleaner that removes paint residue, including two pack, dirt and grease. Camclean can be used for cleaning pressure pot systems, material feed lines and general spray equipment. It is ideal for pre-soaking of spray guns and paint pots before they are placed in a gunwasher machine. Camclean will even remove the residue from the boilers of thinner recycler machines.

Camclean won't damage spraygun seals.

When using Camclean it is essential to surface seal the container with 50mm of water to prevent evaporation.

Camclean is reusable and can be strained.

Available in 4L

### DIRECTIONS FOR USE:

*CAMCLEAN is placed in a metal bucket and then the surface is sealed with a minimum of 50mm of tap water to prevent evaporation. Spray equipment BUT NOT FEED HOSES are then immersed. When all paint residue has wrinkled, wash off with water or solvent if water is not suitable. After removal of surface sealing water, CAMCLEAN can be strained and used again, then returned to the original container.*
