- ★ Fast Drying — Less down time.
- ★ Economical — 22 kg container will cover up to 5 booth applications.
- ★ Easy to remove — Wash off with water.

- ★ Available in
22 kg Containers

CAM COATING Clear Washable Booth Coating is designed to make it quick, easy and economical to protect your major investment — your spray booth.

The coating is applied using a conventional spray gun with spray pressure of approximately 276 kPa (40 psi) or a brush. Apply 2 coats, allowing a film to touch dry between coats. Best results are obtained with thin uniform applications and 30% overlapping passes to guarantee a complete surface seal.

CAM COATING simply washes off with water using either a sponge or hose. Scrubbing with a firm bristle brush may be required to break the surface if an excessive build up of over spray has been allowed to accumulate.

CAM COATING — Another time and money saving product from the CAM range of products.
